

Comprehensive care for children and adults
with bleeding and thrombotic disorders

Our center

The Boston Hemophilia Center is a combined program of Children's Hospital Boston and Brigham and Women's Hospital. We care for more than 400 adults and children with congenital bleeding disorders which makes us the largest hemophilia treatment center in New England. As a federally funded hemophilia treatment center, we provide care to children and adults with hemophilia and other bleeding disorders.

Our services

We offer treatment for patients with hemophilia A and B, von Willebrand Disease, platelet disorders, factor deficiencies, genetic thrombotic disorders and other bleeding disorders. Patients are offered full-service outpatient and hospital services.

Comprehensive medical evaluation and treatment

Our model of patient care is designed to provide integrated, multidisciplinary care to patients of all ages and their families. By emphasizing early diagnosis and intervention to prevent disease complica-

tions, our specialists create a positive impact on the health, life-style and long-term well-being of people with bleeding and clotting disorders.

Ongoing medical management

We have a dedicated team of care specialists who serve as a helpful resource between clinic visits. They are available to answer your questions 24 hours a day, seven days a week.

Counseling and support

Our social workers are expert resources for emotional counseling, financial assistance, school and work advocacy, crisis intervention and referrals to pertinent community resources. One of our social workers is fluent in Spanish.

Home delivery of factor products and supplies

Our Factor Program was established as an inde-

pendent, non-profit factor delivery service in 1999. The program seamlessly integrates cost-effective pharmacy services with your care.

Genetic counseling and testing

One of our physicians is a hematologist and geneticist. Consults are available to families on the genetic implications of having a bleeding disorder.

Access to new treatment approaches through clinical research

Investigators at Children's Hospital Boston and Brigham and Women's Hospital participate in large, multi-center research studies for bleeding disorders, as well as lead smaller independent initiatives to help improve treatment.

Our multi-disciplinary team

Our medical and support staff work together and monitor all aspects of living with a bleeding disorder so that our patients and families receive the best care possible. Our care model emphasizes multi-disciplinary care, and patient and family participation. Children and adolescents with hemophilia and related bleeding disorders are seen at Children's Hospital Boston. Adult patients are seen at Brigham

and Women's Hospital and Dana-Farber Cancer Institute. We involve as many specialists as needed to oversee every aspect of patient care.

- Hematology
- Nursing
- Social Work
- Physical Therapy
- Specialty services such as: genetics, infectious disease, pain management, orthopedics and dentistry

Why choose us?

- We are the largest federally funded hemophilia treatment center in New England.
- Our care model ensures every aspect of each patient's health is monitored by experienced care givers.
- Our staff offers ongoing education, evaluation and communication based on the individual needs of each patient and family.
- We are available 24 hours a day, 7 days a week.
- Our staff coordinates expert home nursing services.
- We offer a seamless transition from pediatric care to adult care.
- We enable people with hemophilia, and their families, to manage the illness as independently as possible, and therefore lead more normal, healthy lives.
