Echocardiogram

R -> L Hemodynamic Shunt at PFO +/- PDA and Absence of Structural Heart Disease

Normal Heart Function & BP

\[ \text{iNO} \]

Normal BP or Mild Hypotension

Dobutamine

Mild Ventricular Dysfunction

Hypotension

Dobutamine & Dopamine

Severe Ventricular Dysfunction

Milrinone +/- Dopamine

Normal or Hyperdynamic Heart Function & Hypotension

Dopamine (DA) 5-15 mcg/kg/min

Dopamine * 20 mcg/kg/min

Hypotension & Normal HR on DA at 20

Epinephrine

Hypotension & Elevated HR with DA ≤ 20

Diminished Peripheral Perfusion

Excessive Peripheral Perfusion

Intravascular Volume Expansion

Consider Norepi & Monitor closely Infant's Response

* Send cortisol level and add Hydrocortisone 1 mg/kg IV Q8 hours x ≥ 48 Hours
